

SERVING PEOPLE ON THE MOVE

MOBILE DISPATCH

Orbital's Mobile Dispatch provides a **completely wireless solution** that puts the power of OrbCAD at the fingertips of your road supervisors, support staff and maintenance personnel. Using Orbital's Mobile Data Computer (MDC), field staff and support personnel can monitor the operations of the fleet while having available to them the real-time information they need to quickly respond to incidents, road calls and service issues.

Mobile Dispatch Includes:

- Integrated Voice/Data Communications
- Flexible Configuration
- Tailored Capabilities
- Incident Monitoring
- Map Displays
- Performance Monitoring
 - Route and Schedule Adherence
 - Missed Reliefs
 - Headway Display
 - Late Pull-Outs

For special events, off-hour operations and major incidents, Orbital's Mobile Dispatch supports full CAD/AVL capability enabling your field supervisors to monitor and dispatch the fleet with the added flexibility and responsiveness available through a mobile dispatch unit. In support of on-board emergency situations, Mobile Dispatch allows supervisors or law enforcement personnel, through WLAN, the ability to monitor real-time video images streaming from the vehicle in distress. From a safe distance, personnel are now better able to assess the situation and act accordingly to better protect both operators and the riding public. The Windows-based MDC provides control, security, scalability and robust management capabilities. In addition, because the application resides on the server, any software updates at the fixed-end are automatically uploaded to each Mobile Dispatch unit.
