

SERVING PEOPLE ON THE MOVE

Maintain reliable communications quickly and safely with operators in your mobile fleet using Orbital TMS' OrbGuide. The OrbGuide is a high performance unit for the management of the communications and control functions of the on-bus equipment.

OrbGuide offers a single point of control and display for vehicle functions for both Fixed-Route and Paratransit services.

The OrbGuide is a microcomputer-controlled device that:

- Serves as a user-friendly graphical interface for the Vehicle Operator.
- Offers a portrait screen layout with a monochrome screen.
- Interfaces with almost any type of mobile radio for voice and data communications

OrbGuide

Orbital's Mobile Data Terminal

Designed for the Transit Industry

Using an industry standard embedded PC architecture, the OrbGuide is an "Open Architecture" product. It is fully compliant with the ITS/FTA SmartBus as well as SAE J1708 and SAE 1587 Vehicle Area Network (VAN) standards, and is capable of interfacing with various radio networks including VHF, UHF, and 800/900 MHz trunked simulcast or multicast radio systems.

Durable: Orbital's OrbGuide is designed to meet the necessary specifications required for heavy-duty vehicle applications.
